In brief

The five best data recovery software tools are Recuva, Disk Drill, SoftPerfect File Recovery, Puran File Recovery, and EaseUS Data Recovery Wizard. These programs can retrieve deleted files from hard drives, USBs, memory cards, and other storage devices using quick or deep scan features.

We all are familiar with the agony that strikes us when we accidentally delete the wrong file. Such mindless or erroneous deletion always comes with the burning realization, not to forget the panic that you just threw in the bin what you desperately needed even if you know other versions of that file are still available to you.

However, with the technological advancement of current times and the widespread availability of a varied range of data retrieval tools in the market the pain of losing a file through unintended deletion becomes somewhat less hurtful.

With the right software, you can recover all the deleted files from your mobile phones, laptops, desktops, or even from external storage devices like a USB or portable hard disk, etc. With such software, the delete button is not therefore left with any real power upon you.

Recuva

Recuva is the most efficient free data recovery tool available online. It is the most user-friendly tool, which provides several advanced features to make it the best out there. It helps you recover files from your hard drive, USBs, disks, memory cards, etc. and it even helps you recover deleted files from your iPod.

File recovery features of Recuva

- Enables you to recover files from formatted drives
- Allows you to recover deleted emails
- Facilitates you with restoring unsaved documents this is the most amazing feature offered by Recuva, which brings great relief for all the writers and students, who rely on Word for every second of their work.
- Helps you with recovering deleted files from iPods
- Finds deleted files in less than a minute with its deep scan feature

Recuva is compatible with all the latest versions of Windows and will instantly run a quick scan through the dark recesses of the hard disk drive to spot the files that have been overridden by you. After all the searches run by the software, a list of all the deleted files will appear. From there, it will be only a point-and-click process. And voila! You have recovered data from the digital graveyard.

Disk Drill

Disk Drill is another famous software in the world of data recovering software. It is second on our list because of its features and because it has a very user-friendly interface. A high-level software can be utilized for businesses as well as personal use. In particular, it is best suitable for businesses that do not want to lose even a shred of information.

For example, an internet service provider will not want to lose track of their previous and new internet packages. Large scale ISPs like Spectrum Internet invest in backups like this to make sure they don't lose track of their precious data or their esteemed customers don't have to face an outage because of a server crash.

Once Disk Drill is installed, it will run a quick scan on your machine to find out all the files which have been deleted by you - and it offers multiple scanning options too. It can not only run a scan on electronic devices like laptops, desktops, and iPads but also on external storage devices like USB, portable hard disk drives, memory cards, music players, etc. because it is fully capable of reading them all.

The most amazing thing about Disk Drill is that it can recover files from a wide range of file recovery systems like EXT, HFS+, NTFS, FAT32, etc. and can restore all your lost files whether it is a music file, a picture, video, or any other custom file format. Every such thing can easily be retrieved and restored by Disk Drill.

SoftPerfect File Recovery

The SoftPerfect File recovery system is another software known to deliver great results. The most amazing thing about this software, which has stolen the third spot on our list, is that it can work from any remote location. In addition, you can even search deleted files by file name or extension.

The software is capable of recovering deleted items from any type of device that stores data whether it's a hard drive or CD/DVD drive. Essentially, it will recover data from all devices, which store files for you on your PC.

The software itself is a very small and standalone file of 500KB which makes it an easily portable software. It supports all the latest and older versions of Windows. Softperfect has itself confirmed that the software supports the 64-bit version of Windows OS as much as the other versions.

Puran File Recovery

Puran File Recovery is fourth on our list because it boasts one of the simplest of all the interfaces coupled with an extremely powerful recovery engine. This software delivers a perfect combination of accuracy, efficiency, speed, and user-friendliness.

Puran File Recovery is efficient enough to scan through the system byte by byte thus increasing the speed of retrieving information of deleted items. It can extract the overridden information and even helps in finding and recovering files from formatted devices.

Moreover, it does not only recover files but also keeps their record of accomplishment. The software will find out deleted records for you and will detect files in different formats based on their particular pattern.

Puran File Recovery software offers a portable version that can be run in a BartPE environment.

EaseUS Data Recovery Wizard

EaseUS Data Recovery Wizard is fifth and last on our list of the 5 best data recovery software. The thing that makes it different from other similar software is that it lets you make a backup of the scanned results to restore them later. It works perfectly well on Windows and Mac OS. The software also provides a previewing feature that allows you to view the file before restoring it.

Moreover, it lets you sort the files by file type, date of removal, and file name. There is one drawback to it though - the software only allows you to recover 500 MBs of data at one time. The above-discussed are the five best data retrieval software that we have come across during our testing process. We hope this article has helped you in selecting the right software.
