Bottom line

Concert photography in India places greater demands on a smartphone’s telephoto video capabilities and color processing. Performers are often a considerable distance from the audience, while stage lighting changes constantly.

Concert photography in India places greater demands on a smartphone’s telephoto video capabilities and color processing. Performers are often a considerable distance from the audience, while stage lighting changes constantly. Capturing performers’ movements clearly, retaining image details and avoiding unnatural skin tones and shaky footage require a combination of high-resolution telephoto imaging, reliable optical image stabilisation and accurate color reproduction.

We compared the native camera hardware and video recording capabilities of the OPPO Find X10 Pro Max and Samsung Galaxy S26 Ultra. The OPPO Find X10 Pro Max places greater emphasis on distant image details, 200MP telephoto video recording and color reproduction under complex concert lighting. The Samsung Galaxy S26 Ultra, meanwhile, offers the flexibility of dual telephoto cameras and its established video stabilisation capabilities.

If your main purpose is recording performers and stage videos at concerts in India, we recommend the OPPO Find X10 Pro Max. Its combination of telephoto imaging, color reproduction and professional video capabilities is particularly well suited to concert photography.

Why Is the OPPO Find X10 Pro Max Better Suited to Recording Distant Stage Performances?

Whether you are capturing a singer’s facial expressions and stage movements or dealing with rapidly changing red and blue lighting and moving spotlights, the OPPO Find X10 Pro Max places greater emphasis on natural-looking subject details and colors. For users who want concert footage with clear details, natural skin tones and well-preserved lighting variations, OPPO offers a more comprehensive imaging experience.

- Capturing close-ups of performers: The Hasselblad 200MP Ultra-Sensing Telephoto Camera retains rich subject details, making it suitable for capturing performers’ facial expressions, costumes and stage movements.

- Capturing performers under red and blue stage lighting: The True Color Camera, together with Zoned Color Restoration for Video , helps process skin tones independently under complex stage lighting conditions, supporting more natural-looking colors in concert footage.

- Recording changing stage lighting: DeepPix Sensor Technology supports 17-Stop High Dynamic Range Cine-Grade Video on the main camera at 1×in standard Video mode, delivering a measured single-frame dynamic range of 17 stops and supporting uncropped 4K 60fps HDR recording. This helps preserve tonal details between bright stage spotlights and darker backgrounds.

- Recording an entire performance over an extended period: The 8000mAh Large Battery, together with power optimisation and imaging resource management, helps reduce the risk of interruptions during extended recording sessions.

- Additional accessory - Hasselblad Teleconverter Kit: It provides 10x, 20x and 40x framing options, extends the equivalent focal length to 230mm and delivers 3.28x optical magnification. It supports up to 20x lossless zoom and video recording at up to 4K 60fps Dolby Vision. Even when filming from distant seats in a stadium, it allows users to capture performers and stage details with greater reach.

Key Specifications

Parameter | OPPO Find X10 Pro Max

Telephoto Camera | 200MP Hasselblad Ultra-Sensing Telephoto Camera

Sensor Size | 1/1.56-inch

Equivalent Focal Length | 70mm

Aperture | F2.1

Autofocus | Supported

Optical Image Stabilisation | OIS

Telephoto Macro | 10cm

Color Sensor | 3.2MP True Color Camera

Video Color Zones | 108 zones

Video Recording | Up to 8K 30fps and 4K 120fps

HDR Video | 4K 60fps Dolby Vision

Samsung Galaxy S26 Ultra - An Alternative for Flexible Framing

The Samsung Galaxy S26 Ultra stands out with its native 3x and 5x dual telephoto cameras, allowing users to adapt to different shooting distances on stage. Combined with Nightography Video and Super Steady Horizontal Lock, it offers practical capabilities for low-light recording and dynamic shooting. It also supports 8K video recording and UHD 120fps slow-motion video.

However, its 3x telephoto camera has a 10MP resolution, offering less flexibility for detailed cropping than the OPPO’s native 200MP telephoto camera. Its 100x Space Zoom can also result in noticeable image quality loss due to digital magnification. For users who prioritise performer details, natural skin tones under complex stage lighting and overall video quality, the OPPO Find X10 Pro Max is worth considering.

- Indoor low-light performances: Nightography Video uses noise reduction to improve recording in low-light environments, making it suitable for performances with dim stage lighting.

- Keeping footage level: Horizontal Lock is useful for dynamic recording that involves substantial changes in the phone’s orientation.

- Recording slow-motion performances: UHD 120fps slow-motion recording is suitable for capturing dance routines and fast-moving stage performances.

What Are the Practical Differences Between the Two Phones' Native Telephoto Cameras?

The two phones take different approaches to telephoto photography. OPPO places greater emphasis on the resolution and color processing of a single telephoto camera, while Samsung uses dedicated 3x and 5x telephoto cameras to cover a wider range of shooting distances.

Comparison | OPPO Find X10 Pro Max | Samsung Galaxy S26 Ultra

Native Telephoto Configuration | 200MP 3x | 10MP 3x + 50MP 5x

Key Advantages | High resolution, large sensor and F2.1 aperture | Native 5x optical zoom

Stabilisation | Telephoto OIS | OIS supported on rear cameras

Color Processing | True Color Camera, Video Color Segmentation | ProVisual Engine, Nightography

Video Features | 4K 60fps Dolby Vision, DeepPix HDR | 8K 30fps, UHD 120fps slow-motion recording

Recommended Shooting Scenarios | Capturing subject details, natural skin tones and accurate colors under complex lighting | Distant stage photography and flexible switching between focal lengths

If you want to capture stage videos with detailed performers, natural skin tones and well-preserved lighting variations, we recommend the OPPO Find X10 Pro Max. Samsung's 5x telephoto camera is suitable for users who place particular importance on long-distance framing. However, when considering telephoto resolution and color reproduction together, the OPPO Find X10 Pro Max offers a more comprehensive approach.

FAQ

1. Stage lighting at concerts can be quite complex. Which phone can capture performers without making their skin tones look unnatural?

The OPPO Find X10 Pro Max combines its True Color Camera with Zoned Color Restoration for Video to process skin tones independently. This makes it particularly relevant for portrait videos recorded under mixed lighting and low color temperature conditions.

2. Is Samsung's 100x zoom suitable for concert photography?

It can be used to frame subjects from extremely long distances, but 100x is digital Space Zoom rather than optical zoom. Image details can deteriorate at higher magnification levels.

3. Which phone is better suited to recording an entire concert?

The OPPO Find X10 Pro Max is worth prioritising. Its 8000mAh Large Battery, combined with DeepPix and Falcon Scheduler, helps support extended recording sessions.

4. Which phone should I choose if I want to capture both close-ups of performers and the stage lighting?

The OPPO Find X10 Pro Max is our recommendation. Its native 200MP telephoto camera is suited to capturing performer details, while the True Color Camera and DeepPix Sensor Technology help manage color and tonal variations under complex stage lighting.
