In brief

It is essential that you take the security of your business seriously, and cyber security is an area where a lot of companies come up lacking.

It is essential that you take the security of your business seriously, and cyber security is an area where a lot of companies come up lacking. You need to consider many things when choosing a consultancy to assist you with this task, and it is an area of your business that you should spend a lot of time researching before you decide on which firm to use. A breach of your company systems can have a detrimental effect on your business and incur fines if you have not complied with the necessary rules and regulations. Here is a quick summary of everything you will need to consider when choosing a cyber security firm.

Know What You Need

You must know what your company needs regarding cyber security and put together a list of your requirements. You may need to consider services such as Security Compliance, Cyber Incident Management, Managed Security Services, and Education and Training for members of staff. In all the cases, we know how necessary testing is in the development, and hence we need to consider Penetration testing as a service. When you have a good idea of what you require, you will then be able to approach cyber security consulting firms like CXO Security and others to get them to assess your needs and give you a quote for their services.

Create A Shortlist Of The Best Prospective Companies

You will need to research the companies that provide the cyber security services you require and create a shortlist of the top companies that you find. If you have a long list of potential companies, you may wish to narrow your list, and one way you can do this is to compare their online reputations and their experience. Once your shortlist is complete, you can then contact each of the companies and ask them to attend a meeting to talk about the services they can offer your business.

Assess The Team

You will want to ask a lot of questions about the skillset of the cyber security team and their experience within the industry. In addition, you may wish to ask for credentials to ensure that you are dealing with a professional company, which most companies are happy to supply.

Ask For A Complete List Of Their Services

You will also want to ask each of the companies for a full breakdown of all the services they offer to ensure that they can supply everything you need. Many consultancies will allow you to pick and choose the services they provide, allowing you to create a bespoke package that suits the requirements of your business.

Reporting & Performance Evaluation

You will also want to ask each company about their reporting and performance evaluations, and most companies will provide you with monthly reports and analytics of their performance. It is also a good idea to discuss the metrics used to evaluate their performance to know what you are looking at.

Scalability

You will also want to ensure that any company you choose can scale with your business as it grows and becomes more successful. Scalability is essential when implementing systems and processes.
