In brief

Facebook has launched its Anonymous Login feature, allowing users to sign into third-party apps like Candy Crush without sharing their personal details.

To help users to maintain their privacy Facebook introduced Anonymous login feature. This feature will help users to not share their personal details to 3rd Party applications like Candy Crush.

(See Lenovo K3 Note with 5.5 Inch Display launched at a Price of Rs. 9,999)

Earlier users playing Candy Crush have to provide their personal details to them to use it. There was no provision to select which details to provide and which not to provide like that.

The new Anonymous feature will be a big solution for all that type of limitations.

Facebook introduced this feature in last year's Developer's Meet and now after one year of research and development it finally implemented.
