Quick answer

Many Snapchat users or snapchatters ask how to enable Snapchat dark mode on iPhone and Android. Dark mode is so popular, and some users always prefer to use the dark mode feature on the application.

Many Snapchat users or snapchatters ask how to enable Snapchat dark mode on iPhone and Android. Dark mode is so popular, and some users always prefer to use the dark mode feature on the application. The dark mode feature is attractive and reduces battery consumption and eye strain.

In this article, we will see how to enable the dark mode feature on Snapchat on iPhone and Android. So, let us see how to activate the dark mode on the Snapchat app for iOS and Android.

Enable Dark Mode on Snapchat on iPhone

Enabling the dark mode on the iOS Snapchat app is pretty simple. It can be done directly from the settings itself. To turn on the iPhone's dark mode on Snapchat from the iPhone, follow the steps below.

Step 1: Open the Snapchat app on your iPhone.

Step 2: From the top left corner, tap on the Bitmoji icon for your profile.

Step 3: No, you will be taken to the profile section. Click on the Settings icon at the top right corner.

Step 4: From the settings section, scroll down to find an option named App Appearance under MY ACCOUNT. Tap on that.

Step 5: Now, you will see three options for the App Appearance. You can set the preference as per your choice.

1. Match System: If you enable this option, the dark mode will work per your iPhone's default settings. If you make the automatic dark mode based on the sunrise and sunset option, the Snapchat dark mode will also work like that. If you made the always dark mode on the iPhone, then Snapchat will always be in dark mode.

2. Always Light: If you activate the Always Light Mode option, the Snapchat app will always be kept in light, irrespective of the iPhone's default settings.

3. Always Dark: If you enable the Always Dark mode option, it won't check the default theme settings of your iPhone. The Snapchat app will always be in dark mode if you enable it. You can always enable the Always Dark option to keep the Snapchat app in the dark mode.

Once done, Snapchat on the iPhone will appear as per your preference.

Enable Dark Mode on the Snapchat Android App

This is a bit tricky these days. The Snapchat dark mode on Android was available in the past; however, the dark mode feature is no longer available in the current and recent versions.

The best option is to remove the Snapchat app installed on your Android device and install the older version of Snapchat, which you can download from third-party sites like the APKMirror.

To do so, head to the APK Mirror website, download the older version of Snapchat, which is Snapchat 10.72.0.0, and install it on an Android phone. If you are unaware of the steps to install the APK file on an Android device, you can check the tutorial to find out how to install the APK file on an Android device.

Downside of Installing Older Version of Snapchat on Android Device

The biggest downside of installing an older version of Snapchat on an Android device is that you won't get the new features available within Snapchat. Some features like Maps will not be available within the old Snapchat app. For the dark mode feature, some new and upcoming Snapchat features will be sacrificed if you prefer to install the older Snapchat.

Force Dark Mode on Android Device

Some suggest forcing Dark mode on Android devices by activating developers more. Since it is a bit technical, we are not recommending the force dark mode feature for regular usage. On the other side, we found that the Force dark mode enabled on Android devices won't work as expected, and you might still see Snapchat in the normal light theme itself on Android.

The best thing is to wait for the official release of a dark mode on Snapchat if you are using an Android device rather than downgrading to the older version, which might not be an optimal solution to enable the dark mode on Snapchat.
