The Telegram desktop version enhances the user experience through additional functionalities and larger screen display options. Whether you are a Mac, Windows, or Linux user, installing Telegram Desktop is something you must try.

Doing so will allow you to enjoy a seamless messaging experience across devices. This article covers everything from downloading and installing Telegram to setting up the account and customizing it to individual preferences. Stick together as we walk you through each stage step by step.

## Telegram Desktop App

Telegram Desktop is a quick, secure desktop app for Mac, Windows, and Linux systems. The desktop app allows users to chat with friends, family, and acquaintances in a simple, accessible way from the computer/ laptop. This standalone application offers a native and feature-rich experience optimized for a larger screen.

It is similar to the Telegram Mobile app but with a more extensive and improved experience. The Telegram Desktop app offers all the essential features and allows users to switch between mobile devices and desktop computers seamlessly while staying in sync.

## How To Download And Install Telegram Desktop App On Mac?

### System Requirements

- Current Version: 9.6.3
- Compatibility: Requires macOS 10.12 or later
- Size: 89.4 MB
- Languages: English, Dutch, German, Italian, Portuguese, Russian, Spanish, Ukrainian

## Method for Downloading and Installing Telegram Desktop App on Mac

1. On your Mac laptop, access any browser and visit <https://macos.telegram.org/>.
  2. Now click on the Get Telegram for MacOS tab, and it will start the downloading process.
  3. Now navigate to the Downloads section on your device, check for the executable file, and run it.
  4. Once the application opens, drag the Telegram icon to the Application folder and run it. Or you can also use the Finder to locate it.
  5. Further, to begin using the Telegram Desktop App, click on Start Messaging. Log in by entering your mobile number, filling in the OTP, and processing. Or you can also use the option Quick login using a QR code. Once you click on the latter option, you will find steps to scan the QR code.
  6. Next, you will be redirected to the Telegram home screen to see chats, channels, and notifications. You can view your calls and contact list or click on the Hamburger menu button to view your Profile Picture. You can also configure Night mode settings and create new channels and groups.
- PRO TIP: Mac users can use reliable third-party AI software and mute the background noise for calls from both sides. It allows using Telegram calling feature with peace.

## How To Download And Install Telegram Desktop App On Windows?

### System Requirements

- Current Version: 4.5.2
- Compatibility: Windows 7 (32-bit and 64-bit) or later versions (Windows 8, Windows 8.1, Windows 10, Windows 11).
- Processor: 1 GHz or faster (both 32-bit and 64-bit processors are supported).
- RAM: At least 1 GB of RAM is recommended for smooth performance.
- Languages: English, Dutch, German, Italian, Portuguese, Russian, Spanish, Ukrainian

## Method for Downloading and Installing Telegram Desktop App on Windows

1. Firstly, use any browser like Google Chrome, Microsoft Edge, etc., and visit <https://desktop.telegram.org/>.
2. Now click on the Get Telegram For Windows x64 tab. If you do not find this tab, click the Show all platforms option. Here by your operating system, download the Telegram Messaging app.
3. Once the downloading process is complete, navigate to the Downloads section on your device, check for the executable file, and run it.
4. Now, on the Telegram Desktop App, click Start Messaging. Log in by entering your mobile number, filling in the OTP, and processing. Or you can also use the option Quick login using a QR code. Once you click on the latter option, you will find steps to scan the QR code. Users with a mobile phone with a Telegram account activated can scan the QR code.
5. If you don't already have a Telegram account on your mobile phone, select "Or log in using your phone number." You will be asked for your phone number before providing a unique OTP via text message for verification. Then type the OTP you have received to start messaging on Telegram via a Windows device.
6. At this point, you have installed the Telegram Desktop App on your Windows system. You can now proceed to use it.

## How To Download And Install Telegram Desktop App On Linux?

### System Requirements

- Current Version: 4.8.3
- Compatibility: Linux static build for 64 bit
- Languages: English, Dutch, German, Italian, Portuguese, Russian, Spanish, Ukrainian

## Method for Downloading and Installing Telegram Desktop App on Linux

Telegram Desktop App On Ubuntu (Linux Distribution):

1. Go to the Software Center and type Telegram in the search bar.
2. Download and Install as you find Telegram Desktop.
3. Or, download from the Terminal by entering the following command: 'sudo apt install telegram-desktop'
4. Once you have downloaded the app, you can use it.

Download using the official Telegram Desktop PPA (for Ubuntu and derivatives) Users who are keen on using PPA can follow the steps given below:

1. Firstly, add the PPA repository: 'sudo add-apt-repository ppa:atareao/telegram'
2. Now run a system update and refresh the APT package index cache: 'sudo apt update'
3. Lastly, run the installation command: 'sudo apt-get install telegram'
4. Once you are done, you can start using Telegram Desktop App on Linux

For installing the Telegram Desktop app in any Linux distribution using the distro-agnostic tarball

1. First, visit Telegram's official downloads page and download the distro-agnostic tarball suitable for Linux.
2. Once downloaded, extract it, locate and move the binary to the "/opt" directory, and link it to the "/bin" directory using the below commands: 'cd ~/Downloads tar -xJvf tsetup.0.7.2.tar sudo mv Telegram /opt/Telegram sudo ln -sf /opt/telegram/Telegram /usr/bin/telegram'
3. Here is the '~Downloads' assume that you downloaded to your "~Downloads" folder. However, you can always change the folder to whichever you downloaded it to.

For installing Telegram Desktop App via Snap All you need to do is enter the following commands into the Terminal, 'sudo snap install telegram-desktop'

For installing Telegram Desktop App via Flaptak All you need to do is enter the following commands in your system, 'flatpak install flathub org.Telegram.desktop'

## Setting up Telegram Desktop on Linux

1. Regardless of your method to install Telegram on Linux, the login method for Telegram Desktop App will be the same.
2. Start by clicking the Start Messaging tab and using your mobile number to log in. You will receive an OTP to begin the process. Or, in case you already have Telegram App installed and activated on your mobile phone, you can use the QR code to scan the same.

## Is Telegram desktop free?

Yes, Telegram Desktop App is 100% free and open. There are no charges for downloading, installing, or using the app. However, it is worth noticing that while the application is free, standard data charges may apply for internet connectivity are required.

## Is Telegram safe on PC?

Yes, the Telegram Desktop App is generally safe to use on a PC. Telegram implements end-to-end encryption for chat privacy. However, few users know Telegram messages are only encrypted in transit from your device to Telegram's servers. Once your data arrives on Telegram servers, it can be seen by Telegram since it gets decrypted.

While Telegram is safe and prioritizes user privacy and security, users must practice caution. It is advisable to avoid sharing sensitive information with unknown or untrusted contacts. Also, stay updated with the latest security patches.

## **Bottom Line**

Overall, downloading and installing Telegram Desktop on your Mac, Windows, or Linux system is simple. It allows for a seamless messaging experience with enhanced features. Follow the steps to download and install Telegram Desktop and enjoy the convenience of accessing Telegram on your desktop.
