Quick answer

YouTube is one of the most famous and trustworthy video sharing platforms available for users all around the world. There are millions of users worldwide who prefer using this genuine video sharing platform for watching their favorite videos and movies.

YouTube is one of the most famous and trustworthy video sharing platforms available for users all around the world. There are millions of users worldwide who prefer using this genuine video sharing platform for watching their favorite videos and movies.

But, recently there is an error coming up when you open a YouTube video which states: "Audio rendered error. Please restart your computer." This error will be a frustrating one for many users while loading a favorite video for sure. Due to this error, users are not able to watch their favorite videos which result in ending their precious time later on.

If you are also facing the same issue, then you do not have to worry about it at all. Here you would come to know about the best solutions you can try from your end to fix YouTube rendered error right now. Let's go through those vital solutions one by one now!

Run audio troubleshooting

You should note that Windows 10 has a built-in troubleshooter to diagnose and fix common problems automatically. There are several troubleshooters for different problems and you can choose any one of them as per your overall needs for sure. For handling the audio renderer error, you should follow the below-mentioned steps to resolve your issue

- The first step is to press the Windows logo key +R to open the Run Box.
- Now you need to type "ms-settings' troubleshoot and select enter
- You should move to play audio
- Now select run the troubleshooter and wait for the process to complete
- After the completion of the process, you need to select the correct device which you want to use and click next
- If there is an issue, then you are going to notice a repair strategy
- Just select yes to fix the issue from your end and then proceed to the next steps for process completion
- After completion of the process, you need to restart your PC and your issue should be resolved

Restart your computer

It would be better for you to understand that restarting your computer will help you to solve the Audio renderer error. Please restart your computer: error. It is a temporary solution, but most of the time it has solved the problem fully. If you are still facing the same issue after restarting your computer, then it is the right time to look for other solutions.

Replug your audio playback devices

Yes, you need to replug your audio playback devices to get rid of this error for sure. You should plug your audio playback devices into your laptop or computer and try to use them to watch YouTube videos. By doing this, your issue should be gone forever and you need to give it a try for sure.

This method will work but will not last for long. To handle this issue permanently, you can look for other methods mentioned below.

Restart your Audio drivers

Most of the time operating system which you are using may occupy some files which can affect your audio device and cause the error later on. In this type of situation, you need to restart your audio drivers which can help in releasing the occupied system files and make your audio back to normal for sure. You should always try restarting your audio driver to handle the issue.

- The first step is to press the Windows logo key +R to open the Run Box.
- Now you need to type "devmgmt.msc" and select enter
- After selecting, a new window will appear which includes information about all the installed hardware and drivers.
- Now you should move to the Sound, video, and game controllers
- You need to disable the device by right click on the specified adapters
- After a few minutes, you need to click the same option and select enable device on the specified adapters
- Now, you should restart your computer to ensure the drivers working properly without any issues at all.

Go back to the older version of your driver

- In some cases, there will be a huge possibility that drivers are fully compatible with the system architecture and audio device of your system. If your drivers are installed but not compatible, then you should roll back to the older version for sure.
- The first step is to press the Windows logo key +R to open the Run Box.
- Now you need to type "devmgmt.msc" and select enter
- A new window will open which includes all the latest installed hardware and drivers. It is known as the Device Manager
- Now you should go to the Sound, video, and game controllers
- Select its properties by right click
- Go under the driver and select roll back driver which will downgrade the driver to the old version.

Update your audio driver

If you are not updating your audio driver regularly, then it is the right time to update it without any second thought. Your outdated drivers may affect the performance of your computer and you need to verify that your devices have the correct and updated drivers for sure. You can get the right drivers either manually or automatically.

For downloading the driver manually, you need to go through the manufacturer's website and look out for the recent correct driver. Make sure you are selecting only those drivers which will be fully compatible with your Windows operating system.

For downloading the driver automatically, you need to wait or you should have good computer skills to use Driver Easy. Driver Easy will help you in recognizing your computer automatically and select the right driver for your device, and your Windows OS will download and install it automatically for sure. It is simple to use and you are not going to face any issues at all.

At last, you are aware of the best and genuine solutions to fix YouTube Audio rendered errors which you can try from your end. All the above-mentioned solutions are helpful and your issue will be resolved by trying all of them carefully. Just try it from your end and share your valuable experiences here with us right now!
