## In brief

To get the image name from an Image Picker ViewController in iOS, access the reference URL from the editingInfo dictionary and extract the last path component.

Get the name of the chosen image from library using the following code in using Image Picker ViewController

```
- (void)imagePickerController:(UIImagePickerController *)picker
didFinishPickingImage:(UIImage *)img
editingInfo:(NSDictionary *)editingInfo{
[picker dismissModalViewControllerAnimated:YES];
NSURL *imagePath = [editingInfo objectForKey:@"UIImagePickerControllerReferenceURL"];
NSString *imageName = [imagePath lastPathComponent];
NSLog(@"image name %@",imageName);
}
```

Here imageName variable will contains the name of the file chosen.
