In brief

If you're going to spend big money on a mouse, it might as well be something worth your hard-earned cash. So, if you are a gamer looking to play some A Grade titles, is a gaming mouse better for you?

If you're going to spend big money on a mouse, it might as well be something worth your hard-earned cash. So, if you are a gamer looking to play some A Grade titles, is a gaming mouse better for you?

Today, with so many options out there, it can be challenging to choose the right one. However, there are a lot of places where you can find great deals on a gaming mouse. The best advice I can give is that you can look for gaming mouse deals in South Africa from PC International, as they offer amazing discounts on gaming mice which are well worth the price you pay!

For now, we'll share some of the things to consider when choosing a gaming mouse.

Things to consider before buying a gaming mouse:

1. Buttons

A gaming mouse has about 11-12 buttons. While a normal mouse usually has 3 buttons at best. The thing is that certain games require you to press certain buttons, like in an FPS game, you might need to press a button for moving, while in others, you may need to hold a button and press another one to trigger an action. So, having a gaming mouse gives you an edge when you play gaming titles.

2. DPI/Sensitivity

The main difference between a regular mouse and a gaming mouse is its sensitivity.

Gaming mouse certainly offers many more features that gamers cannot find in a normal mouse. For example, most gaming mice come with software that can help users tweak them to get high DPI and CPI. Also, the gaming mouse usually has a faster sensor which allows gamers to keep up with PRO gamers.

While a regular mouse can be used for any task, a gaming mouse has to be specially designed to handle the extra strain of fast-paced games. There are different types of gaming mice on the market, such as wired, wireless, and optical. Today's most popular gaming mouse is the wired model, which has more features than its wireless counterparts.

3. Responsiveness (Polling Rate)

The polling rate of a gaming mouse is much higher than that of a regular mouse. As soon as you click and move the cursor, the mouse sends a signal to the computer to perform the following action. This is called polling and is what makes a gaming mouse so responsive.

The responsiveness of a gaming mouse is often cited as being more important than the actual speed at which the mouse can move its way across a surface. If a mouse can get from point A to point B in time, it takes you to blink your eyes, and you are likely to find the mouse easy to use and enjoyable to play with.

4. Type Of Sensor

A gaming mouse will be different from a normal one because they usually have a variety of sensors built into it. Some of these include an Accelerometer, a Gyroscope, Force Feedback, and even a laser sensor that detects movement on the surface of the mouse pad.

These sensors can detect movement in three-dimensional space and allow the user to customize the mouse to their liking. So, with these sensors, a gaming mouse is better than a regular mouse which only comprises a laser sensor or an optical sensor.

5. Ergonomics

First, we'll discuss the ergonomics of a gaming mouse. The gaming mouse usually has a higher resolution than a regular mouse. This means you can make your mouse pointer a lot smaller. The mouse also has more buttons. That's why gamers are so into mice. They can be used for much more than just clicking on things on a computer. It's very easy to use. And, it's designed to be held in one hand.

While a typical mouse is comfortable for the average user, a gamer's needs are different. Gamers, of course, spend a lot of time playing games and thus need to make sure that the mouse is comfortable while they play. As a result, the best gaming mice are designed to give users precise control while still having a good grip. They're also designed to withstand a lot of use and have a lot of range in their movement.

So, if comfort is your priority, you should pick a gaming mouse over a regular one, even if you are not a gamer.

Conclusion

A gaming mouse offers many more features that gamers cannot find in a normal mouse. For example, a gaming mouse usually has a faster sensor which helps gamers keep up with PRO gamers. There are different types of gaming mice on the market, such as wired, wireless, and optical. If a mouse can get from point A to point B in the time, it takes you to blink your eyes, and you are likely to find the gaming mouse responsive.
