In brief

Manually enabling the WhatsApp calling feature by editing the `com.whatsapp_preferences.xml` file on rooted phones will only activate the calling interface and allow incoming calls, but outgoing calls will not work. WhatsApp's invitation servers are currently closed, so full activation is not possible right now.

Since last friday, many whatsapp users are enjoying voice calling feature, Whatsapp opened the invitation for one full day and may users are now enjoying the service. But currently the invitation server are closed again and it may opened in next few days. However rooted device can till change the file '`com.whatsapp_preferences.xml`' in `data/data/com.whatsapp` folder by adding the following code

```
all
```

And force closing the app will enable the calling interface, but the outgoing call feature will not be available, however incoming call will be available.

May be the call activation server will open soon and the calling feature will get activated then.
