In brief

Plex Media Server is a powerful and genuine service that helps you stream your media library to various devices and share that content with your family members and friends.

Plex Media Server is a powerful and genuine service that helps you stream your media library to various devices and share that content with your family members and friends. If you are having a ton of streaming subscriptions and are required to access these simultaneously, then it is the right time to consider the Plex Media server without any second thought.

It is a straightforward, simple, and user-friendly tool to utilize all your several media in a single place - this will make your entire process smoother and you are not going to face any issues at all. It is very much and simple to install the Plex Media Server on Linux and Windows.

You should note that it does not matter if you prefer watching Vimeo videos regularly or if you are an avid podcast user, Plex Media Service will help you with everything that you want on all the devices you have own such as phones, desktops, and even laptops.

The user interface is simple and easy to understand for the users. You are not going to face any issues even if you are using it for the first time. Do you want to know about the step by step procedure to set up Plex Media Server on both Linux & Windows? If yes is your answer, then here you would come to know about all the vital details you are looking for

For installing Plex on your Windows or Linux, there is no need to install any other software. You just need to install the server software first and then you can proceed further with the next steps. After doing this, you can install apps on your device so that you would be able to connect each device to the server.

Setting Up and Installing the Plex Media Server

It would be better for you to understand that Plex Media Server can run on Windows, Mac, or even on Linux computers - most people prefer using their every-day computers, others have a dedicated computer for doing their tasks.

You can also install it on a compatible networking attached storage device. Plex will work smoothly on most modern computers. There are two vital considerations regarding performance you should be aware of.

First, the Plex Media Server will allow multiple people to view content at the same time. All the members of your family will be able to view media on Plex at the same time and no issues will be arising for sure. But you should note the server has to work harder to view content at the same time with your family members and friends.

You should note that if your server is not strong enough for how you are using it, then you are going to face some playback issues such as buffering or stuttering for sure.

Make sure your server is enough strong so that you would be able to enjoy your favorite shows and movies without any hassle for sure. If you still facing the same issues, then it means the CPU cannot keep up with the number of users, then it is the right time to update your hardware.

It may also mean that your network is very slow and hardware is fine. You should check from both sides and handle it carefully for the best results.

Downloading the Plex Media Server

First, you need to decide where you are going to install the Plex Media Server. After making the right decision, you need to visit the Plex website and download the server for your device. It is very vital to ensure that the server computer has an internet connection at the time of installing.

By doing this way, the step wizard will run smoothly and you would be able to set up an account during the process. Make sure your internet connection is strong enough to make the process run smoothly without any issues.

Installing and Running the Plex Media Server

The process of installation is very simple and you do not have to be tech-savvy for installing it. It is a normal installation program on Windows and you need to move the downloaded app to your "Applications" folder for OS X.

After the completion of the installation, the server will run for the first time and a new browser will launch. It will ask you to enter your account details or you can create a new account if you do not have one.

You should accept the terms of service and the new set-up wizard will start soon. You need to note that the server needs to be running smoothly before you can access the Plex Web App in a browser.

Launching the Plex Media Server

Launching Plex on Windows

- If you have selected Plex Media Server at the end of the installation process, then it will be running already
- If you are not able to find it, then you can find it in the start menu and launch it

Launching Plex on OS X

- You should first open the Applications folder
- Now you need to find Plex Media Server
- At last, you should Double-click it, and you are done

Launching Plex on Linux

- First, you should open a command prompt
- Now you need to type `sudo /etc/init.d/plexmediaserver start`

Conclusions

At last, you are aware of the vital steps you need to follow for setting up Plex Media Server on your Windows and Linux. All the above-mentioned steps are easy to process and it will not take your more precious time. Plex is the media platform of your own where you would be able to set up your media server with your all favorite movies and TV shows.

After installing the Plex on your Windows and Linux system, you would be able to access the media server from anywhere in the world. Just try it from your end and share your valuable experiences here with us right now!
