In brief

Do you want to colorize old black-and-white videos? They might be family movies from years ago, your favorite classic films, or even old historical clips.

Do you want to colorize old black-and-white videos? They might be family movies from years ago, your favorite classic films, or even old historical clips. UniFab AI Video Colorizer can turn these gray, flat videos into bright, colorful stories. It uses smart technology to add natural, realistic colors to black-and-white videos. The way to use it is easy, and you don't have to be a professional to do it.

How It Works: Simple and Automatic

The secret to the success of UniFab lies in its advanced artificial intelligence. This AI has learned from millions of videos, so it knows what things should look like in color.

When you upload a black-and-white video, the AI examines every frame. It looks at the elements in the video-like trees, faces, or houses-the environment (indoor or outdoor, day or night), and even the lighting. Then it selects meaningful colors. So the sky turns blue, the grass turns green, and skin looks like real skin.

And the best part? The colors stay the same from one frame to the next. No weird flickering or sudden changes. Your video will look smooth, like it was always in color.

Four Styles for Any Video

Not every video needs the same kind of color. That is why UniFab AI Video Colorizer gives you four different color styles. Want a warm, old-fashioned look for your family's old videos? Or bright, bold colors for a classic movie? You can check out each style first and pick the one that fits.

If your video has different parts-like some scenes inside and some outside-UniFab "Multi-Scene Colorization" can handle that. It splits the video into parts and uses the best style for each. The result? A video that looks natural all the way through.

More Than Just Coloring: Fixing and Improving

UniFab does not just add color to black-and-white videos. It can also make your colored videos look better. Got an old video that's faded? It brings back the brightness and warmth. Colors looking off or uneven? It fixes them to look right.

If you want even better quality, use it with UniFab HDR Upconverter AI. It can turn your colored video into HDR10 or Dolby Vision, making colors pop and details sharper.

Faster Thanks to New Tech

UniFab works faster now, thanks to updates. It supports NVIDIA 50 Series GPUs, so your video gets colored quicker. Whether it's a short home video or a longer film, you won't be waiting forever.

Great for All Kinds of Videos

Family memories: Turn old black-and-white home videos into colorful stories. See your parents' wedding or your childhood birthday with real colors-so those moments stay alive for years.

Classic films: Give old black-and-white movies a new look. Add colors that fit the movie's style, so you can enjoy them in a whole new way.

Cultural heritage: Museums or projects with old archive videos? UniFab adds real-looking colors to make history feel like it's happening now, helping people connect with the past.

Historical events: Old documentaries or news clips? Color makes them feel less like something from a textbook, so people today can understand and relate better to what happened.

What Users Think

People love how easy and good UniFab is. One person used it to color a black-and-white war documentary. "It was amazing," they said. "The sky turned blue, the soldiers' uniforms looked real-it made the story feel so much more emotional."

Another user fixed a faded colored film: "It was all gray and dull, but UniFab brought back the warmth. Skin looked healthy, grass was green-it was like watching the film for the first time."

Easy to Use in 4 Steps

You don't need to know a lot about tech to use UniFab. Here's how simple it is:

Step 1: Upload your black-and-white video.

Step 2: Pick one of the four color styles (you can check them first to see what works).

Step 3: Turn on "Multi-Scene Mode" if your video has different parts.

Step 4: Let the AI Video Colorizer do its thing. Soon, you'll have a colorful, smooth video.

Pricing Plan

Not sure if it's right for you? UniFab has a 30-day free trial. You get to use all its features, and there's no watermark on your videos. It's a great way to test it with your own videos.

Why UniFab Is Different

There are other video colorizers, but people love UniFab because it's easy, gives natural results, and works fast. It's for everyone-whether you're saving family memories, fixing a classic film, or making history feel real.

With UniFab AI Video Colorizer, black-and-white videos don't have to stay stuck in the past. They can become bright, emotional stories that feel new and real. Give it a try, and see your old videos in a whole new way.
