Keeping your computer's hardware drivers up to date is essential for system stability, performance, and compatibility. While Windows offers built-in updates, they're not always reliable in finding the latest or most compatible drivers for your specific hardware. That's where Driver Support One steps in.

Developed by PC Drivers Headquarters LP, Driver Support One is a third-party tool designed to automatically scan, identify, and update outdated or missing drivers on your Windows PC.

Let's check everything you need to know about Driver Support One—from what it does to whether you should keep or remove it.

What is Driver Support One?

Driver Support One is a utility software for Windows that simplifies the process of driver updates. Once installed, it scans your computer's hardware, compares the installed drivers with its online database, and then recommends updates for any outdated or missing drivers.

Unlike manually visiting manufacturer websites or relying on limited Windows updates, Driver Support One aims to streamline and automate the entire process.

Key Features of Driver Support One

Here are the main features you can expect when using Driver Support One:

1. Automatic Driver Scanning & Updates

The software performs a complete scan of your PC and detects outdated, missing, or even corrupted drivers. It then provides the option to download and install the latest versions directly.

2. Active Driver Monitoring

The tool continuously monitors your system for any driver changes or new updates, notifying you when a new version becomes available.

3. Driver Backup & Restore

Before making any updates, it offers the ability to back up your current drivers. If a new update causes compatibility issues, you can easily roll back to a previous working version.

4. Hardware Matching

It ensures that the correct drivers are downloaded by matching them with your system's manufacturer and model-reducing the risk of installing incompatible drivers.

5. Device Support

It supports a wide variety of hardware, including:
