### In brief

Buying a laptop can be an overwhelming task if you don't know what to look out for or how much money you should spend on it. There are so many different laptops available that it can get confusing trying to decide which one will suit your needs best.

Buying a laptop can be an overwhelming task if you don't know what to look out for or how much money you should spend on it. There are so many different laptops available that it can get confusing trying to decide which one will suit your needs best. Besides considering the RAM, battery life, CPU, screen resolution, storage space, etc., the laptop sizes should never be overlooked when buying a new computer. This article will help you understand more about the right average laptop size that's ideal for you.

## Laptop Screen Sizes

Laptop screen sizes vary, and the choice was based on the user's preferences. However, the most commonly preferred sizes are 14 inch and 15-inch laptops. Following are the different sizes you.

### 1. 13-inch Laptops

A good rule of thumb is to buy a laptop with at least 12 inches of width because most people prefer bigger screens to smaller ones. If you're looking for something small, 11" would be great as this fits in almost all bags without taking too much room. You also want to make sure that the weight of the laptop doesn't exceed 2 pounds; otherwise, it might not feel comfortable while typing. Most 13 inch laptops weigh between 1.5 - 3 lbs.

### 2. 14-inch Laptops

If you have been thinking about getting yourself a larger-sized laptop but still haven't decided whether you need a desktop replacement or just a portable device, then consider going for a 14-inch laptop instead. These devices usually come with better graphics capabilities compared to their counterparts from other manufacturers. They are also lighter than their 13-inch counterparts, making them easier to carry around. The downside, however, is that they tend to cost slightly more than their 13-inch counterparts.

### 3. 15-inch Laptops

If you like having lots of space to work with, then you may find a 15-inch laptop perfect for you. It has enough space to spread out your documents and programs comfortably. However, these laptops aren't very light either, weighing anywhere between 4 - 6lbs depending on the model. Some models even offer touchscreens allowing users to interact directly with their computers. A great feature to add to any laptop is a backlit keyboard which makes working late into the night easy.

### 4. 17-inch Laptops

17-inch laptops are becoming increasingly popular due to their ability to provide plenty of workspaces. In addition, with a 17-inch screen, you'll be able to view multiple windows side by side, giving you ample room to do some serious multitasking. Although there isn't anything wrong with owning a 17-inch laptop, keep in mind that they are quite heavy and therefore require extra care when carrying them around.

## Reasons to consider laptops with large displays

Larger displays allow you to see more information at once. For example, if you were writing a report, you could open two browser tabs and write down notes next to each tab. When finished, close both browsers and continue working on the first tab. Now you've got three things written down!

Large displays also give you more options when choosing apps. Instead of scrolling through menus to choose a program, click the app icon and start working immediately. The most significant advantage of a large display is its versatility. Whether you use it to watch movies, play games, browse the web, or do homework, you'll always have access to everything you need.

Large display laptops can help save money over time. Since you don't have to purchase additional accessories such as external monitors, speakers, mice, etc., you will end up saving hundreds of dollars for several years. In addition, since you won't have to worry about buying new batteries every few months, you will avoid spending thousands of dollars on battery replacements.

The best part about large display laptops is that they are incredibly versatile. You can easily take one home and set it up right away without worrying about compatibility issues. Then, if you decide later that you want to connect an external monitor, mouse, or speaker, all you have to do is plug those items in and go. No complicated setup is required.

Large display laptops are ideal for students who spend most of their day sitting behind a desk. Because they are so big, making it much easier to read text while typing papers, taking notes, or studying.

## Conclusion

Considering the right laptop size depends entirely upon personal preference. For example, if you plan to do a lot of gaming, you'd probably want to opt for a heavier machine. In contrast, someone who only uses their laptop for browsing the internet wouldn't necessarily benefit from such a big screen. In addition, if you intend on purchasing a laptop online, you should always check its dimensions before placing your order. Finally, make sure that the laptop fits within your budget and meets your expectations.
