In brief

Android native menu may opening when pressing menu button while using PhoneGap.

Android native menu may opening when pressing menu button while using PhoneGap.

This may sometime caused while using the latest cordova-2.6.0, Even if the DroidGap class which is used for the phonegap development contains the default android class Activity in it, which is a must class for the menu function, the latest cordova has some issue with it.

It is better to use the cordova-2.5.0 version rather than 2.6.0, which will solve the problem.
